

GREAT NEWS!

The TankSure® Ultrasonic Tank Test and Inspection

The TankSure® ultrasonic tank test can be performed on any residential oil tank under 550 gallons (2081 Liters). The test is simple to perform and can be conducted in 30 minutes or less. The test uses sound waves to determine the thickness of the tank and to identify how much internal corrosion is occurring, which is the only way to determine the integrity of the tank while in service. It also is a detailed visual inspection of the tank and the tank system components, such as lines, valves and vents. After the test is performed the client will be provided a tank inspection certificate detailing the findings of the test and any recommended actions to be taken. **The tank inspection certificate is accepted by ING Insurance as an alternative to age based replacement for insuring homes with above ground storage tanks.** An annual inspection will create a data trend on the tank to help identify when it needs to be replaced as well as maintain the alternative insurance benefits for the homeowner.

VALUABLE BENEFITS INCLUDE:

- Proven ultrasonic testing technology
- An alternative to age based replacements
- Environmentally friendly process
- Tank Inspection Certificate
- Peace of mind protection
